NFL Database

Are you a diehard NFL fan? Can you just not seem to get enough fantasy football every time Fall rolls around? And when it does, are you tired of pouring over an endless number of statistics to find the ones you're really interested in? The ones that matter most to you and your fantasy team? Well here's your solution.

Our company, Adrian & Brian Collaborative Databases, or ABCD, is developing an innovative database designed for people just like you. The idea for this new database comes from the need of fantasy football fanatics to have NFL player and team information at their fingertips as they draft their rosters and play out their fantasy seasons. Our database will provide the data needed to produce the statistics that most concern fantasy football owners and players, including quarterback ratings and touchdowns, wide receiver catches, cornerback interceptions and tackles, and team stats like wins, losses, yards per game, and yards allowed by defense per game. The statistics provided by our database can keep up with the week to week trends and fluctuations inherent in football and will help you predict how players will perform in a fantasy football setting. Why include every nitty-gritty football statistic when you only need the stats that rack up points in your fantasy league? Our database will be intuitive, easy to use, and our data will be accurate and well organized for your searching needs. The A&B Football Database will have everything you need for your upcoming, or ongoing, fantasy football season.
